SUMMARY

Technical founder who builds platforms from scratch and leads the teams that scale them. At WhaleHawk, I designed and shipped the entire technical infrastructure — six microservices, an entity resolution system in a graph database, AI-powered intelligence pipelines, and a live web scraping engine — while leading engineering, building the team's processes, and representing the product to prospects. I own every layer: architecture, backend, AI/LLM integration, data, cloud infrastructure, CI/CD, and product development. I am impeccable at measuring complex technical solutions on a timeline, and delivering what I promise.

EXPERIENCE

WhaleHawk — Technical Founder & Engineering Lead

2024 – Present

Intelligence delivery platform built for healthcare sales verticals.

Roles: Technical Founder, AI Engineer, Platform Architect, Product Developer, Engineering Team Lead

Architecture & Infrastructure

- Designed and built six production microservices from the ground up: Source Pipeline, Intelligence Layer, App Server, CRM Layer, Analytics, and Live Scraping Engine
- Architected the Entity Resolution System in a graph database to map relationships across the ecosystem, connecting all microservices to canonical entities
- Engineered dual-container ECS deployment with async runtime isolation to prevent cross-service corruption
- Built the entire engineering process from scratch — CI/CD pipelines, team workflows, internal standards, and best practices

AI & Intelligence Systems

- Designed RAG pipelines for content extraction, chunking, AI-powered intelligence generation, embedding, and vector indexing
- Built a live web scraping engine using Playwright and Browserless.io that scrapes the internet at scale in real time
- Integrated OpenAI and Anthropic Claude SDKs for embeddings, intelligence extraction, and automated analysis
- Implemented LangChain, LangGraph, and LangSmith for orchestration and LLM tracing
- Built audio transcription pipeline using Faster Whisper

Product & Leadership

- Translate business strategy directly from the CEO into technical architecture — decide what gets built, how, and in what order
- Represent WhaleHawk's technical system to prospects in an outward-facing role
- Built vendor-specific recommendation engine from financial data, translating domain logic from the data analytics team into a scalable automated program
- Designed CRM integration layer pulling from HubSpot and Salesforce, translating client data into context for intelligence packages

Stack: Python 3 (async), FastAPI, SQLAlchemy, Alembic, NestJS 11, TypeScript, Express.js, PostgreSQL, Prisma, Redis, Qdrant, Pinecone, OpenAI SDK, Anthropic Claude SDK, LangChain, LangGraph, LangSmith, Faster Whisper, Playwright, Browserless.io, Cheerio, AWS ECS Fargate, EventBridge, S3, ECR, Secrets Manager, Docker, GitHub Actions, BullMQ, Sentry, Passport.js, JWT, Stripe

Adiantum — AI Systems Consultant & Full-Stack Engineer

2025 – Present

- Advisory services for AI startups on system architecture and RAG implementation
- HIPAA and SOC2 compliance consultation for healthcare startups
- LLM integration via API, AWS Bedrock, and serverless Lambda

AVYST — Platform Architect & Full-Stack Engineer

2023 – 2025

Enterprise platforms for insurance tech — driver onboarding, risk management, compliance monitoring, analytics.

- Architected and built the Risk Management Center: full-stack platform with RBAC, automated document processing (AWS Textract), transactional email, containerized deployment
- Built the Risk Manager Dashboard: real-time analytics with custom data visualization, delivered in 6 weeks
- Designed and shipped mobile-first driver onboarding app that reduced driver-to-admin touchpoints by 6
- Built automated compliance reminder system using AWS Lambda and CloudWatch with near 100% notification delivery
- Implemented enterprise RBAC system achieving SOC 2 compliance
- Built rule-based commercial insurance application with custom form engine, reducing processing time from weeks to hours

Stack: React, Next.js, TypeScript, Node.js, Express.js, MongoDB, PostgreSQL, Redux, AWS (S3, Textract, Lambda, ECR, SQS), Docker, Terraform, Mandrill API

EDUCATION

University of Colorado — Magna Cum Laude — Anthropology and Dance (2012)

Microsoft Azure AI Engineering Certification (2024)

Flatiron School — Full Stack Web Development (2023)

Python for Scientific Computing — Certificate (2023)

Fastai and PyTorch — Deep Learning for Coders

TECHNICAL SKILLS

Architecture: Microservice design, entity resolution, event-driven systems, graph databases, multi-container orchestration

Backend: Python 3 (FastAPI, SQLAlchemy, asyncio), NestJS, TypeScript, Node.js, Express.js, Prisma, BullMQ, Redis

Cloud & DevOps: AWS (ECS, EventBridge, S3, ECR, Secrets Manager, Lambda), Docker, GitHub Actions, Sentry

AI/LLM: RAG pipelines, vector search (Qdrant, Pinecone), OpenAI + Claude SDKs, LangChain, LangGraph, live web scraping at scale

Databases: PostgreSQL, MongoDB, Qdrant, Pinecone, Redis, graph databases

Integrations: HubSpot, Salesforce, Stripe, Playwright, Browserless.io, Apollo, SerpAPI
